## Abstracts

?Langmuir Probe Diagnostic System is a diagnostic tool used to measure plasma parameters. The voltage-current (I-V) curve is obtained by inserting a metal probe into the plasma, applying a scanning voltage to the probe, and collecting the current signal on the probe at the same time. The electron density, electron temperature, ion current density and other parameters of plasma can be calculated according to the correlative diagnosis theory. The system is widely used in plasma physics research, material processing, aerospace and other fields to monitor and analyze the properties of plasma in real time.

The global ?Langmuir Probe Diagnostic System market size was estimated at USD 667.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.80% during the forecast period.
