Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Laparoscopic Monopolar Electrode competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of laparoscopic monopolar electrodes reached 6.2 million units, with an average selling price of US\$65 per unit. These laparoscopic monopolar electrodes are widely used in minimally invasive surgery. They utilize a monopolar, high-frequency current to achieve tissue cutting, separation, and coagulation. They offer flexible operation, effective hemostasis, and minimal trauma, making them commonly used in general surgery, gynecology, urology, and thoracic surgery. Their primary upstream raw materials include medical-grade stainless steel, insulating ceramics, polytetrafluoroethylene (PTFE), and polycarbonate. Major suppliers include BASF, Dow Chemical, SABIC, and Sumitomo Chemical. Downstream customers primarily include medical device manufacturers and healthcare institutions, with representative companies including Johnson & Johnson Ethicon, Medtronic, Olympus, and Stryker. Going forward, these electrodes will evolve towards high-insulation safety designs, lightweight materials, intelligent integration with energy platform systems, and deep integration with surgical robots to meet the growing global demand for minimally invasive surgery.

The global Laparoscopic Monopolar Electrode market size was estimated at USD 404.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
