Abstracts

Agricultural balers are essential pieces of equipment used in modern agriculture to efficiently bundle harvested crops such as hay, straw, cotton, silage, or other forage materials into compact and manageable bales. These bales are then used for storage, transport, and as feed for livestock. Agricultural balers help reduce crop wastage, enhance forage quality, and facilitate easy handling and storage of harvested crops. Agricultural balers play a crucial role in the efficient handling, processing, and packaging of crops like hay, straw, cotton, and other forage materials into compact, manageable bales. Here are the key factors contributing to the growth of the agricultural baler market:

Mechanization and Modernization of Agriculture: The global trend toward mechanization and modernization in agriculture is a significant driver of the agricultural baler market. Farmers are increasingly adopting advanced equipment to improve efficiency and productivity.

Demand for Efficient Crop Handling: The demand for efficient crop handling and management is driving the need for balers that can quickly and effectively bale crops for storage, transport, and sale. Balers are critical for minimizing crop wastage.

Rise in Livestock Farming and Forage Demand: The growth of the livestock industry worldwide has increased the demand for high-quality forage, driving the need for efficient baling solutions like balers to ensure a steady supply of fodder.

Focus on Crop Residue Management: Increasing awareness of the importance of effective crop residue management for soil health and sustainability is driving the demand for balers that can efficiently handle crop residues like straw and corn stover.

Government Subsidies and Incentives: Government support in the form of subsidies and incentives for the purchase of modern agricultural equipment, including balers, encourages farmers to invest in advanced machinery, boosting the market.

The global Large Baler market size was estimated at USD 1457.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the

forecast period.
