Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Large Cargo Drone competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Large cargo drone is an unmanned aerial vehicle (UAV) specifically designed to transport significant payloads over long distances. These drones are capable of carrying large and heavy cargoes, making them suitable for various applications in industries such as logistics, delivery, and transportation. Large cargo drones have the potential to revolutionize the logistics and transportation industry by offering faster, more flexible, and environmentally friendly alternatives to traditional transportation methods. They can be used for various applications, including delivery of goods to remote areas, emergency response operations, and transporting critical supplies to disaster-stricken regions. In 2024, global Large Cargo Drone sales volume reached approximately 880 units, with an average global market price of around 305 k US\$ per unit. The volume of express delivery business is growing rapidly, and drone logistics effectively accelerates logistics efficiency and solves distribution problems in difficult areas. The profit margin of express delivery business has declined, and the cost of employment is high, which has prompted logistics companies to choose to develop more unmanned logistics tools. The aviation industry chain has made great progress, and all the required components can basically be made domestically. At the same time, the development of battery, motor and other technologies driven by the new energy vehicle industry has also greatly reduced the R&D and production costs of large cargo drones. Large cargo drones can be used in many fields, such as logistics and transportation, air tourism, air traffic, agricultural remote sensing, public safety, emergency rescue, etc., and have broad market prospects.

The global Large Cargo Drone market size was estimated at USD 271.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 34.50% during the forecast period.
