Abstracts

The Large Diameter Beam Analyser (LDBA) is an advanced optoelectronic instrument designed to precisely measure and characterize laser beams with diameters exceeding those accommodated by standard beam profiling equipment, typically ranging from several millimeters up to tens of centimeters or more. It employs high-resolution sensors, such as CCD or CMOS arrays, along with specialized optical components like beam expanders or diffusers to capture and analyze beam parameters including intensity profile, beam width (via methods like D4 σ or knife-edge), divergence, M² factor, and centroid position across a large cross-sectional area, ensuring accurate diagnostics essential for high-power laser systems, industrial laser processing, scientific research, and telecommunications applications where beam quality and spatial properties critically impact performance.

The global Large Diameter Beam Analyser market size was estimated at USD 245.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
