Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Overhead Scanner competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. An overhead scanner is a digital imaging device that captures documents or objects from a fixed position above them. Unlike traditional flatbed scanners, it uses a suspended camera module pointing downward to acquire images without physical contact. This non-invasive design allows for the scanning of bound materials, fragile books, and even three-dimensional objects without damage. Commonly used in archives, libraries, and offices, it saves space and enhances workflow efficiency. Modern overhead scanners often feature high-resolution sensors, autofocus, and built-in lighting to ensure uniform illumination and produce clear, distortion-free digital copies. An overhead scanner captures documents, books, or archives from above with high precision, uniform lighting, and minimal distortion, ensuring accurate color and detail for professional digitization. Unlike a document camera or high-speed scanner, which prioritizes speed and convenience for office or classroom use, an overhead scanner focuses on archival quality, long-term preservation, and batch scanning, making it ideal for libraries, museums, universities, cultural heritage and government institutions. In 2024, global Overhead Scanner sales reached approximately 122,516 units, with an average global market price of around US\$ 1,064 per unit. For large overhead scanners, the production capacity of a single company is usually within the range of a few hundred units, while small overhead scanners are priced much lower and their production capacity can reach tens of thousands of units. The industry's average gross profit margin is about 30%-50%. As for the consumption, APAC is the largest consumer, who owned 39% share in global consumption market in 2024, consumption volume was 47,750 Units. The follower is North America, with the consumption volume of 34,380 Units in 2024,

accounting for 28% sales share in 2024. Zeutschel, Ricoh, Image Access, MICROBOX GmbH, i2S SA, Canon (IRIS), Qidenus Technologies, Hanwang Technology and Metis Systems are the key manufactures in the global Overhead Scanner market. Among them, Zeutschel is the largest manufacturer, its revenue share of global market exceeds 16.5% in 2024. The market concentration is high, top five players accounted for about 53% of the world's revenue share.
