Report Overview

Large FOV (Field of View) telecentric lenses are specialized optical components designed to maintain a constant magnification across varying object distances within a large viewing area. Unlike conventional lenses, telecentric lenses ensure that the chief rays are parallel to the optical axis, eliminating perspective errors and providing uniform image quality and magnification. This characteristic is crucial in precision measurement, industrial inspection, and imaging applications where dimensional accuracy and consistency are paramount. Large FOV telecentric lenses enable the capture of extensive areas while preserving the integrity of measurements and images, making them essential in fields requiring high precision and large-scale observation.
