Abstracts

Large ground energy storage systems refer to systems that can store large amounts of energy and release it when needed. They are usually used to balance power supply and demand and improve grid stability and reliability. These systems generally include energy storage equipment (such as batteries, supercapacitors, compressed air energy storage, etc.) and energy conversion equipment (such as inverters, transformers, etc.). Large-scale ground energy storage systems can store excess electricity by converting it into other forms of energy (such as electrochemical energy, compressed air energy, etc.), and then release the stored energy during peak power demand periods to reduce the load pressure on the power system.

The global Large Ground Energy Storage System market size was estimated at USD 3500.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 15.50% during the forecast period.
