Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Large-megawatt Hub Base Frame competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of large-megawatt hub base frames reached 1.3479 million tons, with an average selling price of US\$1,785.31 per ton. The gross profit margin was 5.1%, and the single-line production capacity was 50,000 tons. Raw materials accounted for 52.92%. In a wind turbine, the hub is connected to the nacelle base via the main shaft. The hub base frame is the connecting structure or support part between the hub and the nacelle base. Its design must ensure the hub is stably fixed and effectively transfers the load to the nacelle base, ultimately supported by the tower. The hub base frame is the device that secures the blades or blade groups to the rotating shaft. It is a key component connecting the blades to the generator's rotating shaft, and it withstands the thrust, shear, torque, variable torque, and gyroscopic torque exerted by the wind on the blades. The hub base frame's function is to transfer the wind force and torque acting on the blades to the generator, thereby transferring the load on the blades to the base or tower. Large-megawatt hub base frames refer to those above 4MW. Large-megawatt hub base frame production capacity is tight, and a global supply gap is expected over the next five years. Large-megawatt hub and base frame production places higher demands on furnace size, plant/pit dimensions, vehicle load capacity, and machining equipment. Existing small-megawatt supporting capacity cannot meet the demands for efficient production. Casting expansion faces constraints such as tight production targets, high capital expenditures, long construction cycles, and technical difficulties. Existing or under-construction capacity is limited, and companies are primarily concentrated in China.

The global Large-megawatt Hub Base Frame market size was estimated at USD 2406.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.40% during the forecast period.
