Abstracts

A large-scale reed switch is an electromechanical device that uses two or more ferromagnetic reeds sealed within a glass tube, which act as electrical contacts that open or close in response to an external magnetic field; designed for high-volume applications, these components are characterized by their reliability, simplicity, low power consumption, and ability to operate without physical contact, making them integral in industries requiring precise magnetic sensing, such as automotive systems (e.g., speed sensors, seatbelt detection), security devices (e.g., door and window sensors), medical equipment (e.g., flow meters, proximity detectors), consumer electronics, and industrial automation, where their hermetically sealed construction ensures durability and resistance to environmental contaminants.
