## Abstracts

The spherical roller bearing is a type of rolling bearing featuring double rows of rollers, with a single shared spherical raceway on the outer ring and two raceways on the inner ring that are inclined at an angle relative to the bearing axis. This structure endows the bearing with self-aligning capabilities, enabling it to automatically compensate for axial center deviations and bending of the housing or shaft. Large size spherical roller bearings refer to spherical roller bearings with relatively large dimensions, typically used in large machinery. They have an outer diameter of over 200 millimeters, and ones with an outer diameter exceeding 440 millimeters are classified as ultra-large bearings.

The global Large Size Spherical Roller Bearings market size was estimated at USD 2302.93 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
