Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Laser 3D Printed Galvo Scan Head competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A galvanometer is a complex system integrating optomechanical, electronic, and control technologies. Its main function is to reflect the incident light beam, thereby achieving regional scanning or point-to-point scanning of the beam. A laser 3D printing galvanometer is a vector scanning device used in laser processing, characterized by low inertia, high-speed scanning, precise positioning, and closed-loop feedback control. In 3D printing, the galvanometer's rotation speed and accuracy are crucial, especially when creating lightweight and support structures, requiring frequent rotations and high precision to ensure the smoothness and accuracy of the printed surface. Furthermore, because 3D printing uses layer-by-layer scanning, the cumulative processing time of the workpiece is longer than that of welding new energy batteries, thus placing relatively higher demands on the stability and heat control of the galvanometer. The scanning speed of the galvanometer is also one of the core factors affecting printing efficiency. The faster the scanning efficiency of the galvanometer module, the more effectively the laser scanning adjustment time can be reduced, resulting in higher production efficiency. In 2024, the global production of Laser 3D Printed Galvo Scan Heads reached 211,200 units, with an average selling price of US\$249.28 per unit and a gross profit margin of 35.79%. The company's monthly output reached 800 units, and its downstream customers are laser equipment companies such as TYKMA, MACSA, and RMI.

The global Laser 3D Printed Galvo Scan Head market size was estimated at USD 52.64 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of

18.50% during the forecast period.
