## Abstracts

3D Laser Scanning is a non-contact, non-destructive technology that digitally captures the shape of physical objects using a line of laser light. 3D laser scanners create point clouds of data from the surface of an object. In other words, 3D laser scanning is a way to capture a physical object's exact size and shape into the computer world as a digital 3-dimensional representation. 3D laser scanners measure fine details and capture free-form shapes to quickly generate highly accurate point clouds. 3D laser scanning is ideally suited to the measurement and inspection of contoured surfaces and complex geometries which require massive amounts of data for their accurate description and where doing this is impractical with the use of traditional measurement methods or a touch probe. A 3D laser scanner is a device that digitally captures the shape of physical objects using a line of laser light. 3D laser scanning is a non-contact process that is used to analyse the real-world object to collect data in terms of its shape and appearance. The collected data in turn is used to create 3D models. Mounting applications of 3D laser scanner by the various end user verticals such as automotive, healthcare, aerospace and defence, architecture and construction, energy and power and others is a major factor bolstering the market growth. Evolving market from 3D scanners especially in the developing economies will further create lucrative market growth opportunities. Rising need to capture large volume of data for modelling, analysis and research purposes is also fostering the market growth. However, high initial cost involved in 3D laser scanner will pose a major challenge to the market growth. Also, high installation and maintenance costs will act as market growth restraints. Availability of traditional alternatives to 3D laser scanners will further derail the market growth rate.

The global Laser 3D Scanner market size was estimated at USD 6612.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.20% during

the forecast period.
