Report Overview

Laser annealing refers to local heating, which changes the color of the heated material according to the heating temperature. The annealing color can vary between yellow, red and green according to the temperature of the marked surface. Nothing is removed from the surface heated during annealing. The heat of the laser will produce an oxidation process, leaving a permanent mark, which is very suitable for permanently tracking products such as medical equipment. It is ideal for keeping the surface smooth and adding dark permanent marks to prevent oxidation.
