Abstracts

Laser beam diagnostic system is a kind of precision equipment used to accurately evaluate and monitor laser beam characteristics. It is mainly composed of detector, optical lens, data processing unit and so on. The detector is responsible for capturing various information of the laser beam, such as intensity distribution, spot location, etc., and converting it into electrical signals; The optical lens adjusts and focuses the laser beam to ensure that the beam enters the detector in a proper form. The data processing unit receives the electrical signal data from the detector, uses complex algorithms to process and analyze, and calculates the key parameters of the beam, such as spot size, divergence Angle, M² factor, etc., so as to obtain the comprehensive evaluation result of the beam quality. The system can monitor the laser beam quality in real time and feed the measurement results back to the operator or the automated control system for timely adjustment of relevant parameters.

The global Laser Beam Diagnostic System market size was estimated at USD 276.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.90% during the forecast period.
