Abstracts

Laser cable marking is a process that uses laser technology to engrave or mark specific information onto the surface of cables. A high - energy laser beam is focused on the cable surface, and through precise control of the laser's parameters, such as power, frequency, and scanning speed, permanent marks are created. The marks can include various types of information, such as cable specifications (e.g., diameter, length, conductor material), product names, model numbers, batch numbers, barcodes, QR codes, and even custom logos or patterns. This marking method offers several advantages, including high accuracy, fine detail, excellent durability, and resistance to abrasion, chemicals, and environmental factors. It is a non - contact process, which means it does not cause mechanical damage to the cable, and it can be easily integrated into automated production lines, improving production efficiency and ensuring consistent marking quality. Laser cable marking is widely used in industries such as telecommunications, electronics, automotive, and aerospace to achieve cable identification, traceability, and quality control.

The global Laser Cable Marking market size was estimated at USD 104.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
