Abstracts

Laser cladding alloy powders are fine metallic materials engineered for use in additive manufacturing processes where a high-energy laser beam is used to melt the powder and fuse it onto a substrate, forming a metallurgically bonded coating or part layer. These powders are precisely formulated with specific chemical compositions?often including nickel, cobalt, iron, or carbide-based alloys?to impart desired properties such as wear resistance, corrosion resistance, high-temperature performance, or dimensional restoration to components across industries like aerospace, energy, automotive, and heavy machinery. The process enables precise, minimal-heat-affected-zone repairs, surface enhancement, and part customization, offering a sustainable alternative to part replacement while extending service life and improving performance under demanding operational conditions.

The global Laser Cladding Alloy Powders market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
