## Abstracts

Laser cutting auxiliary gas is the gas used in the laser cutting process, which is mainly used to improve cutting efficiency, improve cutting quality and protect equipment. Common auxiliary gases include oxygen, nitrogen, argon and compressed air. Oxygen is mainly used for carbon steel cutting, and it increases the cutting speed by oxidizing with the metal; nitrogen is used for stainless steel and aluminum alloy cutting to provide an inert environment to prevent material oxidation; argon is used for cutting highly reflective materials to reduce the damage of laser reflection to the equipment; compressed air is used for low-cost cutting needs. The choice of auxiliary gas depends on the material type, thickness and cutting quality requirements. High-purity auxiliary gas can significantly improve cutting accuracy and efficiency.

The global Laser Cutting Auxiliary Gas market size was estimated at USD 822.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
