Abstracts

Laser Direct Imaging (LDI) equipment is a type of equipment used for the exposure process in the PCB process. In LDI, the laser scanning method directly forms the image on the PCB, which is different from the traditional method of transferring the image to the PCB by irradiating the film with a mercury lamp. Therefore, LDI can eliminate the film process in the exposure process, save time and cost in loading and unloading films, and reduce deviations caused by film expansion and contraction. In addition, due to the high precision and detail of laser, LDI has high image resolution and fine wires can reach about 20um, which is suitable for the production of fine wires. These advantages of LDI improve the yield of PCB production. The continuous upgrading of PCB products has put forward higher requirements for traditional exposure technology, and direct imaging technology has become the mainstream technical solution in the manufacturing of mid-to-high-end PCB products. Therefore, LDI equipment is increasingly used in the PCB industry, and the market size is also expanding. Secondly, with the continuous advancement of technology, the manufacturing cost and sales price of LDI equipment are expected to further decrease, which is expected to promote its replacement of traditional exposure equipment in low-end PCB fields such as single-panel and double-panel, and further increase market penetration. In addition, with the improvement of environmental awareness, the environmental protection of LDI equipment has also become the focus of attention. Environmentally friendly LDI equipment can not only meet market demand, but also bring stronger competitiveness to PCB manufacturing companies. The global LDI equipment market is expected to continue to grow in the next few years. On the one hand, with the rapid development of electronic information industries such as 5G communication equipment, smartphones and personal computers, VR/AR and wearable devices, there is a demand for mid-to-high-end PCB products such as multi-layer boards, HDI boards, flexible boards, and IC carrier boards. The volume will continue to increase, which will further drive the demand for high-end

LDI equipment. On the other hand, the global PCB industry will enter a stage of high-quality development, which will promote technological progress and industrial upgrading of LDI equipment.

The global Laser Direct Imaging (LDI) Devices market size was estimated at USD 946.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
