The laser encoder is a high-precision measurement tool whose working principle is based on the reflection principle of laser. When the laser beam hits the surface of the object to be measured, reflected light will be generated and received by the receiver. The calculator will then calculate the phase difference of the reflected light signal to determine the position and displacement information of the object surface.

The global Laser Encoder market size was estimated at USD 420.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
