## Abstracts

Laser engraving software is specialized software designed to control laser engravers and transform digital designs into actual engravings. This software can import images in a variety of formats, such as JPEG, PNG, and BMP, and perform image editing and processing, such as adjusting brightness and contrast and applying filters. It can also convert images to the grayscale format commonly used by laser engravers and replicate grayscale tones through features like dithering. Artificial intelligence and machine learning technologies will be more widely adopted in laser engraving software, enabling features such as automatic path optimization and automatic error detection and correction, and are expected to improve processing efficiency by 30%-50%. Cloud-based laser engraving software allows users to remotely access and manage engraving systems, providing a more flexible user experience. The market is moving towards more user-friendly interfaces and intuitive software design, reducing operational complexity and improving usability, attracting more novice users and non-professionals. Beyond traditional areas such as advertising signs and custom handicrafts, laser engraving software is increasingly being used in high-end sectors such as consumer electronics, new energy vehicles, photovoltaics, aerospace, and healthcare.

The global Laser Engraving Software market size was estimated at USD 129.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
