Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Laser Foreign Object Detection System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of laser foreign object detection systems reached 124,000 units, with an average selling price of \$46,000 per unit. Laser foreign object detection systems are high-precision inspection devices based on laser scanning and photoelectric imaging principles. They are used to identify defects such as foreign matter, scratches, bubbles, and microparticles on and within products or materials. They are widely used in semiconductor wafers, pharmaceutical packaging, food production, lithium battery separators, optical films, and precision manufacturing. Upstream raw materials include lasers, optical lenses, CMOS sensors, algorithm control modules, and mechanical components. Major suppliers include Coherent, Leica, Hikvision Micro-Image, Basler, and Keyence. Global production capacity is approximately 132,000 units per year, with an industry average gross profit margin of 38%-45%. Downstream consumption is driven by semiconductor and electronics manufacturing, accounting for approximately 50%, pharmaceutical and food packaging for 30%, and new energy and optical inspection for 20%. Laser and optical component costs account for approximately 58% of the upstream raw material costs. In the future, the system will develop towards high speed, AI algorithm recognition, multi-spectral fusion and non-destructive testing to meet the needs of high-end manufacturing for micro-defect detection, cleanliness control and intelligent quality inspection.

The global Laser Foreign Object Detection System market size was estimated at USD 5704.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.20% during the forecast period.
