## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Laser Glass Cutting Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Laser glass cutting machine is a device that uses high-energy-density laser beams to perform non-contact precision cutting of glass materials. It generates local high temperatures on the glass surface by focusing the laser, causing the material to melt, evaporate, or generate thermal stress cracks, thereby achieving precise separation. Compared with traditional cutting methods, laser glass cutting has the advantages of smooth incisions, no microcracks, and no need for subsequent processing. It is suitable for glass processing of various thicknesses and shapes, and is widely used in consumer electronics, architectural decoration, automobile manufacturing, optical devices and other fields.

The global Laser Glass Cutting Machine market size was estimated at USD 753.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
