Abstracts

Laser stripping (LLO) refers to the process of separating a thin layer from a substrate (such as polymer and glass) by using a homogeneous UV wavelength laser beam. The main requirement of successful LLO is that the substrate is transparent to the working wavelength and the target layer is opaque. The Laser Lift Off (LLO) System market is a specialized sector within the semiconductor and display manufacturing industries. LLO systems are critical for the fabrication of advanced electronic devices, especially in the production of thin-film transistors (TFTs) and microLED displays. These systems employ high-powered lasers to precisely remove a substrate layer from the semiconductor wafer, separating the active device layers without damaging them. This technique is pivotal for manufacturing processes that require ultra-thin and flexible displays, as well as for creating high-performance TFTs used in various electronic devices. With the increasing demand for cutting-edge displays in applications such as smartphones, tablets, and large-screen televisions, the Laser Lift Off System market is poised for substantial growth. Moreover, the continued evolution of semiconductor technologies and the pursuit of thinner and more energy-efficient devices are expected to further drive the adoption of LLO systems in the semiconductor and display manufacturing sectors.

The global Laser Lift Off System market size was estimated at USD 399.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
