Report Overview

The Laser molecular beam epitaxy system (LMBE) is developed on the basis of the traditional molecular beam epitaxy (MBE) and pulsed laser deposition system (PLD). The combination of PLD and reflective high energy electron diffractometer (RHEED), which provides in situ monitoring, enables the system to achieve thin film growth with single-atom layer accuracy similar to that of MBE. LMBE is a high-end film preparation equipment suitable for growing single or multilayer films at various nanoscale.
