Abstracts

Laser night vision cameras are specialized surveillance devices that utilize infrared laser illumination to capture high-resolution video in extremely low-light or total darkness, offering superior performance compared to traditional infrared LED-based systems through longer detection ranges, reduced light pollution, and enhanced image clarity. These cameras are employed in security, defense, wildlife monitoring, and industrial applications where standard visible-light imaging is impractical or insufficient, combining advanced sensor technology with laser diodes that emit non-visible infrared light to illuminate subjects without alerting them to the surveillance.
