Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Laser Phosphor Display Technology competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Laser Phosphor Display Technology is a lamp less projection illumination technology that is using blue laser diodes as the primary light source. The laser phosphor technology is powered by a combination of laser diodes, mirrors and a phosphor screen. These diodes direct a laser signal to the mirrors and these lasers are then projected onto the phosphor screen, stimulating the required RGB imaging sequence. It works basically like a laser printer, in which image is being refreshed at a much higher rate. Laser phosphor display is similar to cathode ray tube technology but it activates phosphors using lasers instead of electron gun. It is because of this the laser phosphor displays are never burdened with screen burn-in as compared with traditional display technologies. The growth in demand of laser phosphor display technology in video wall segment is mainly due to enhanced quality of image, decrease seam appearance, and promote sustainable practices. Laser phosphor technology displays help in providing displays of any shape, size and resolution allowing for innovative dynamic environments. Because the phosphor pixels have no electrical connections, so they do not experience mechanical or electrical failure. In 2024, global Laser Phosphor Display Technology production reached approximately 1475.49 K Units, with an average global market price of around US\$ 2103 per unit. Based on the product type, the laser Phosphor Display Technology is primarily split into the Monitor Laser Phosphor Display Technology, the Projector Laser Phosphor Display Technology and Others. The second kind is the main production type, accounting over 98% of the sales value market in 2024. Geographically, Asia-Pacific is the biggest part of the consumption market with 59% of the market sales share, followed by North America

and Europe.

The global Laser Phosphor Display Technology market size was estimated at USD 3103.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.20% during the forecast period.
