Report Overview

Laser welding uses a precise IR laser beam that is directed through a transmissive material and penetrated into an absorptive material. The two materials are held in tight contact with each other and the joint between them heats up and melts as energy from the laser is absorbed. The result is a clean weld with minimal flash.

The global Laser Plastic Welding Machine market size was estimated at USD 305.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
