Abstracts

Laser processing technology is increasingly used in the automotive interiors industry for its high precision, high speed, high flexibility and perfect processing effect. The laser is in many ways an ideal tool for automotive interior applications. It is a non-contact method that produces no stress on the processed part, and requires virtually no downtime for tool replacement. In contrast, mechanical cutting is limited by tool wear and downtime for tool replacement, and waterjet cutting is limited by its slower throughput. Laser processing also allows the production of smaller features and delivers tighter tolerances than alternative technologies such as mechanical cutters. Another advantage of lasers is their ability to deliver defined depth cuts (blind holes or slits that only penetrate part of the way through the workpiece). Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.

The global Laser Processed Automotive Interior Parts market size was estimated at USD 1640.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
