Report Overview

Laser protective lenses are also called laser windows and laser dust-proof lenses. They are mainly used to protect the focusing lens and prevent splashes from splashing onto the lens and causing damage to the lens. Regular replacement of the protective lens can ensure the processing accuracy requirements. Coating the anti-reflection coating with high damage threshold (>15Jcm2) on the lens can effectively increase the transmittance of the lens, reduce the loss of damage energy, and improve the quality of processed products.
