Abstracts

Laser resurfacing devices are medical or aesthetic instruments that utilize concentrated beams of light to remove damaged or aged skin layers layer by layer, stimulating the body's natural collagen production and resulting in smoother, tighter, and more even-toned skin. These devices are categorized into two primary types: ablative lasers, which remove the outer skin layers for more dramatic results but require longer recovery, and non-ablative lasers, which work beneath the skin surface with minimal downtime. Applications range from treating fine lines, wrinkles, and acne scars to improving skin texture, pigmentation, and overall skin rejuvenation, making them a cornerstone technology in both clinical dermatology and cosmetic practice.

The global Laser Resurfacing Devices market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
