Abstracts

laser rust ablation machine is a new type of non-grinding, non-contact and environmentally friendly cleaning method. At the same time, it can solve problems that cannot be solved by traditional cleaning methods. It is mainly used for high value-added products in high-precision industries. Using high-frequency high-energy laser pulses to irradiate the surface of the workpiece, the coating layer can instantly absorb the focused laser energy, so that the oil stains, rust spots or coatings on the surface can be evaporated or peeled off instantly, and the surface attachments or surface coatings can be removed at high speed and effectively, and the laser pulse with very short action time will not damage the metal substrate and will not cause secondary pollution under appropriate parameters. Laser rust ablation machine can complete the cleanliness that is difficult to achieve by conventional cleaning, which is safe and efficient and has low long-term costs. Laser cleaning has become an important stage/process in various industries. Laser cleaning is mainly used in the manufacturing industry. With the rise of refined production, hardware technology has also undergone many upgrades. Automated cleaning processes are often used to prepare surfaces for subsequent industrial processes and therefore need to comply with the changes brought about by Industry 4.0. Additionally, blasting systems generate large amounts of waste and damage delicate surfaces, and the use of chemical solvents creates potentially hazardous vapor and liquid waste. These issues have led to surface cleaning solutions based on laser technology. The adoption of laser cleaning has been driven by the potentially huge advantages of laser cleaning over these traditional methods. Additionally, laser cleaning enables accurate and precise cleaning of semiconductors, driving its adoption in the electronics industry. Rising demands for reliability and an increasing number of errors in electronic components caused by no-clean procedures are forcing electronics manufacturing to refocus on cleaning. The cleaning industry offers a wide range of options for determining the ideal cleaning method, driving the

growth of the laser cleaning market.

The global Laser Rust Ablation Machine market size was estimated at USD 879.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.30% during the forecast period.
