Abstracts

Laser Web Guiding Sensor is a high-precision photoelectric detection instrument based on laser technology for position deviation measurement. It includes a laser transmitter, a receiver and a signal processing system. It irradiates the surface of the object to be measured with a laser beam, receives the reflected light signal and analyzes the position change, and feeds back to the control system to adjust the material position. It is used to detect and correct the position deviation (lateral or longitudinal deviation) of the material in the production process in real time. It is widely used in lithium battery winding, integrated circuit pin flatness detection, metal surface flatness measurement and other scenarios.

The global Laser Web Guiding Sensor market size was estimated at USD 218.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
