## Abstracts

Laser welding finned tube is processed by laser welding machine. Laser welding is a welding method that irradiates a high-intensity laser beam onto the metal surface. Through the interaction of the laser and the metal, the metal absorbs the laser light and converts it into heat, melting the metal to form a cooling crystal. Because the welding process is fully automatic and mechanical, the scientific and technological content and quality of laser welding finned tubes are superior to traditional cooling tubes. Delfin Tubes is one of the most important global key manufacturers of laser welded finned tubes, holds a share of about 10%, other key manufacturers include Murphy Thermal Energy Technology, Schmoele, and GLORYTUBETECH, etc. China is the largest market, occupied for about 50 percent, followed by Europe. In terms of type, solid type is the largest segment, with a share of about 60%, and in terms of application, the chemical industrial segment holds a share of over 25 percent.

The global Laser Welded Finned Tubes market size was estimated at USD 71.3 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
