### Report Overview:

Latent curing agent is a curing agent that has certain storage stability at room temperature after being combined with epoxy resin, and can quickly cross-link and cure epoxy resin under conditions such as heating, light, moisture or pressure.

Now most epoxy curing agents are two-component, they not only need to be packaged, stored and transported separately, which brings many operational and environmental problems, but also measurement errors and uneven mixing during mixing and preparation can easily cause fluctuations in important properties such as the adhesive strength of the product. The viscosity of the system continues to increase with the progress of the chemical reaction, and its service life is limited. It is not suitable for the new automatic bonding process, and it is easy to cause scrap.

The development of one-component epoxy resin curing agents with improved quality and suitable for new processes has always attracted people's attention.

The research and development of latent curing agent is the most active and important. This type of curing agent is mainly implemented by temporarily blocking or passivating the active groups and structures of some curing agents with high reactivity and poor storage stability. Many general-purpose two-component rings The low-temperature, medium-temperature and high-temperature curing agents of epoxy resin adhesives are developed by adjusting and controlling the reactivity by physical and chemical means. After this type of curing agent is added to epoxy resin, it has good room temperature, Storage stability under normal pressure. During use, external physical and chemical factors such as moisture, light, heat or pressure can be used to activate relatively stable

curing agents according to different mechanisms and participate in the curing of epoxy resin.

The Global Latent Curing Agents for Epoxy Resin Market Size was estimated at USD 325.66 million in 2023 and is projected to reach USD 488.72 million by 2029, exhibiting a CAGR of 7.00% during the forecast period.
