Report Overview

A Launch and Recovery System (LARS) is a mechanical system designed to deploy and retrieve equipment, vehicles, or payloads—typically in marine, aerospace, and defense operations—under controlled and safe conditions. In the maritime sector, LARS are essential for deploying and recovering remotely operated vehicles (ROVs), autonomous underwater vehicles (AUVs), diving bells, and other subsea instruments from ships or offshore platforms. The system typically includes winches, cranes, A-frames, docking heads, and control systems that ensure precise handling even in challenging environmental conditions such as high sea states. In aerospace and defense, LARS are also used for launching and recovering unmanned aerial systems (UAS) or rescue equipment. Their design focuses on safety, efficiency, reliability, and minimizing human intervention during complex deployment and retrieval tasks.

The global Launch and Recovery System market size was estimated at USD 23.1 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 11.70% during the forecast period.
