Abstracts

Laundry ERP Software is a comprehensive information management platform incorporating enterprise resource planning concepts. Designed for laundries, large self-service laundry chains, and in-house laundries, it aims to digitally integrate and optimize their entire business processes and resource allocation. It goes beyond basic order management, encompassing core functionality from customer relationships, sales orders, production planning, and shop floor execution to warehousing and logistics, financial accounting, and data analysis. By embedding RFID tags or barcodes on each piece of linen, the system enables precise tracking and automated data collection throughout the entire laundry process, from collection, sorting, washing, ironing, and shipping, ensuring traceability and error prevention. At the management level, it provides granular monitoring of utility consumption, chemical inventory, and automatic calculation of unit costs and order profits. It also generates multi-dimensional operational analysis reports, providing management with accurate data-driven decision-making support for pricing, capacity planning, and customer management. Ultimately, by breaking down departmental information silos, the software builds an efficient and collaborative operations hub, driving laundry companies to achieve standardized, lean, and intelligent modern management upgrades.

The global Laundry ERP Software market size was estimated at USD 90.12 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
