The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Lauramide MIPA competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Lauramide MIPA (Monoiso-propylamine lauramide) is a non-ionic surfactant derived from fatty acids and monoiso-propylamine, widely used as a foam booster, thickener, and viscosity modifier in personal care products, household cleaners, and industrial formulations. It offers excellent foam stability, mildness to skin, and compatibility with anionic, cationic, and non-ionic surfactants, making it suitable for shampoos, body washes, dishwashing liquids, and car wash detergents. In 2024, global Lauramide MIPA sales reached approximately 56750 Tons, with an average market price of around 1674 USD/Ton. The Lauramide MIPA market is driven by growing demand for high-performance yet mild surfactants in personal care and household cleaning products, fueled by consumer preference for rich-foaming, skin-friendly formulations. The rapid expansion of emerging markets, rising disposable incomes, and the trend toward premium and eco-friendly cleaning products are further boosting demand. Additionally, its multifunctionality and compatibility with various surfactant systems make it attractive for cost-optimized formulations in industrial cleaning and car care sectors.

The global Lauramide MIPA market size was estimated at USD 95.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
