## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Lauroyl Diethanolamide competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Lauroyl Diethanolamide is a nonionic surfactant that is readily soluble in water and organic solvents, is mildly irritating, and readily biodegradable. It performs multiple functions, including thickening, foam stabilization, emulsification, and detergency. Its upstream components are basic petrochemical raw materials and natural oils. Its core components are lauric acid and diethanolamine. Lauric acid can be derived from natural oils (coconut oil/palm kernel oil) or petrochemical sources, and its raw material price is influenced by the oil market and supply and demand. DEA is a conventional amine raw material supplied by basic chemical plants. It is a nonionic surfactant used primarily as a foam stabilizer and viscosity modifier in daily chemical products such as shampoo and liquid soap. It is also used as a detergent and thickener in textile printing and dyeing auxiliaries. Global sales in 2024 were expected to reach approximately 34,500 tons, with an average market price of approximately US\$1,900 per ton. Single-line production capacity varies depending on the production process and investment in production equipment, typically ranging from 500 to 3,000 tons per year, with industry gross profit margins ranging from 15% to 30%.

The global Lauroyl Diethanolamide market size was estimated at USD 66.1 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
