Abstracts

Lawesson's reagent, or LR, is a chemical compound used in organic synthesis as a thiation agent. Lawesson's reagent was first made popular by Sven-Olov Lawesson, who did not, however, invent it. Lawesson's reagent was first made in 1956 during a systematic study of the reactions of arenes with P₄S₁₀. The chemistry of Lawesson's reagent and related substances has been reviewed by several groups. The main use of Lawesson's reagent is the thionation of carbonyl compounds. For instance, Lawesson's reagent will convert a carbonyl into a thiocarbonyl. Additionally, Lawesson's reagent has been used to thionate enones, esters, lactones, amides, lactams, and quinones. With the continuous improvement of global environmental protection awareness, the Lawson reagent industry may face increasingly stringent environmental protection requirements and the pressure of sustainable development. This will prompt enterprises to continuously develop more environmentally friendly and sustainable Lawson reagent products and technologies, thereby bringing new development opportunities to the industry.

The global Lawesson's Reagent market size was estimated at USD 7568.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.70% during the forecast period.
