Abstracts

LCD backlight driver ICs are integrated circuits designed to regulate and supply the precise power required to illuminate the backlighting systems in liquid crystal displays (LCDs), such as those found in televisions, monitors, smartphones, tablets, automotive displays, and other electronic devices. These ICs typically convert input power?often from batteries or AC adapters?into the high-voltage AC or constant-current DC outputs needed to drive cold cathode fluorescent lamps (CCFLs) or, more commonly today, light-emitting diodes (LEDs). Key functionalities include brightness control (via PWM or analog dimming), over-voltage and over-current protection, thermal management, and energy efficiency optimization, ensuring consistent illumination, extended display lifespan, and reduced power consumption across a wide range of operating conditions.

The global Lcd Backlight Driver Ic market size was estimated at USD 1150.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.75% during the forecast period.
