LCD Rubbing Machine is a vital device in LCD manufacturing. It is equipped with a motor - driven alignment roller wrapped with LCD rubbing cloth. During operation, the roller rubs the LCD panel coated with an alignment film. This rubbing process creates tiny grooves on the film surface. These grooves force liquid crystal molecules to align in a specific direction, enabling proper orientation for image display in LCDs. It features high precision and stability, playing a crucial role in enhancing LCD display quality and production efficiency.

The global LCD Rubbing Machine market size was estimated at USD 74.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
