LCD displays utilize two sheets of polarizing material with a liquid crystal solution between them. An electric current passed through the liquid causes the crystals to align so that light cannot pass through them. Each crystal, therefore, is like a shutter, either allowing light to pass through or blocking the light. LCD panel is the key components of LCD display. And the price trends of LCD panel directly affect the price of liquid crystal displays. LCD panel consists of several components: Glass substrate, drive electronics, polarizers, color filters etc. Only LCD panel applied for TV will be counted in this report.
