The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on LDI (Laser Direct Imaging) Machines competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The LDI (Laser Direct Imaging) Machines offer auto focus capabilities so that the system can handle different thicknesses of material and rapid job change-overs without expensive tooling. Core driving factor The demand for 5G and high-end PCBS: The demand for multi-layer and high-speed PCBS has driven the penetration rate of LDI in the mid-to-high-end manufacturing sector (currently over 60%). Emerging application expansion: Accelerating the application of technologies in scenarios such as MiniLED, IC substrate, and precision processing of new energy vehicle batteries. Policy support: China's special policies and tax incentives for intelligent manufacturing promote the process of domestic production. Technological iteration direction High precision and intelligence: The domestic production rate of optical systems has increased (currently about 50%), but high-power ultraviolet laser modules still rely on imports. Digital control technology continues to upgrade. Multi-material compatibility: Extended to the processing of metals, ceramics and other materials, meeting the demands of aerospace, medical and other fields. Competitive situation International dominance: International enterprises such as Orbotech hold 81% of the global market share, while Chinese manufacturers like XGI Microelectronics and Han's CNC are accelerating their pursuit. Domestic substitution space: China has a high dependence on imported high-end equipment, and domestic enterprises focus on breakthroughs in core components (such as Ruike Laser). Industrial chain synergy Upstream breakthrough: The localization of lasers and optical components is accelerating, but key modules still need to be imported. Downstream demand differentiation: Semiconductor packaging and new energy batteries have become key investment areas. Risks and Challenges Risk of

technological substitution: Traditional exposure processes still have cost advantages, while new display technologies may engage in cross-industry competition. External uncertainties: Be vigilant about the risks of fluctuations in raw material prices, international trade barriers and technological blockades.
