Abstracts

Lead salt PVC stabilizers are a class of heat stabilizers primarily composed of lead-based compounds, such as lead stearate or tribasic lead sulfate, used to prevent the thermal degradation of polyvinyl chloride (PVC) during processing and extend the service life of the final product by inhibiting dehydrochlorination and subsequent discoloration; despite their historical effectiveness, cost-efficiency, and broad applicability across rigid and flexible PVC formulations?particularly in pipes, cables, and profiles?their usage has significantly declined in many regions due to stringent environmental and health regulations concerning lead toxicity, prompting a shift toward safer alternatives like calcium-based, tin-based, or organic stabilizers, though they remain in use in some developing markets where regulatory pressures are less severe or where their performance in demanding applications is still valued.

The global Lead Salt Pvc Stabilizer market size was estimated at USD 450.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
