Report Overview

Guide rail: A groove or ridge made of metal or other materials that can withstand, fix, guide moving devices or equipment and reduce their friction. The longitudinal grooves or ridges on the surface of the guide rail are used to guide and fix machine components, specialized equipment, instruments, etc. Guideway, also known as slide rail, linear guide rail, or linear slide rail, is used in situations of linear reciprocating motion. It has a higher rated load than linear bearings and can bear a certain amount of torque, achieving high-precision linear motion under high loads. Ball screw is an ideal product for converting rotary motion into linear motion, or for converting linear motion into rotary motion.
