Abstracts

Leafing aluminum pigment is a kind of flake metal pigment made of high-purity aluminum powder through special processing. Its surface is hydrophobic and has low surface tension. When used in coatings or inks, aluminum flakes can spontaneously float to the surface of the coating to form a continuous metallic luster layer, presenting a bright mirror effect. This type of pigment is widely used in decorative coatings, metallic effect printing inks and other fields, but the weather resistance and corrosion resistance requirements are lower.

The global Leafing Aluminum Pigments market size was estimated at USD 154.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.80% during the forecast period.
