## Abstracts

A leakage current transformer is a current transformer used to detect and measure leakage current in electrical equipment. It usually works by inducing the change in the magnetic field of the current and converting the leakage current signal into a voltage signal that is easy to monitor. Leakage current transformers are widely used in power systems, industrial equipment, and household appliances to monitor the magnitude of leakage current to ensure the safety of the equipment and prevent accidents such as electric shock or fire caused by electrical faults. By timely detecting and reporting leakage current, leakage current transformers play a vital role in electrical protection and safety monitoring systems.
