Report Overview

The leakage protector, also known as a residual current device (RCD) or ground fault circuit interrupter (GFCI), is an electrical safety device designed to prevent electric shock and fire hazards by detecting and interrupting abnormal current flows, such as leakage currents caused by insulation failures or direct contact with live parts. It operates by continuously monitoring the balance between incoming and outgoing current in a circuit; if an imbalance exceeding a predetermined threshold (typically 5-30 mA) is detected, the device quickly disconnects the power supply within milliseconds. Widely used in residential, commercial, and industrial settings, leakage protectors are critical for ensuring electrical safety in applications ranging from household appliances and power outlets to large-scale electrical installations. The market for these devices is driven by stringent safety regulations, increasing awareness of electrical hazards, and the growing adoption of smart and energy-efficient systems that integrate advanced protection features. Key segments include plug-in, portable, and fixed models, with variations in sensitivity, response time, and compatibility with different voltage systems. Technological advancements, such as IoT-enabled RCDs with remote monitoring capabilities, are further shaping market evolution.

The global Leakage Protector market size was estimated at USD 300.83 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.25% during the forecast period.
