Report Overview

This tester has been engineered specially for testing the bending or other types of failure at the point of flexing creases. It can check the flexibility of materials such as leathers, coated fabrics and sheet materials. The Flexing Resistance Tester is particularly viable in determining the resistance of vulcanized rubber and synthetically formed elastomers. Rubber, generally has a tendency to form cracks under such conditions where repeated flexing or bending is performed. So this machine plays an important role in the development of rubber based products such as footwear where it is necessary to determine the bending ability of the rubber without cracking.
